A NEW ERA OF ADMINISTRATIVE EFFICIENCY: WORKDAY AND BROWN UNIVERSITY

In the fast-paced world of higher education, administrative efficiency is no longer a luxury—it is a necessity. For institutions like Brown University, a member of the Ivy League and a leader in academic innovation, the need to modernize back-office operations while supporting a complex, decentralized

academic environment is paramount. This drive for transformation led Brown to make a strategic decision that would reshape its human resources, payroll, and finance operations: the adoption of Workday. The journey of Workday and Brown University is a compelling case study in how a world-class academic institution leverages cutting-edge cloud technology to improve service delivery, empower employees, and lay a stronger foundation for future growth. This article explores the partnership, the implementation, the challenges, and the lasting impact of Workday on the Brown

University community.

WHY CLOUD-BASED ERP? THE STRATEGIC IMPERATIVE AT BROWN

Before the arrival of Workday, Brown University, like many legacy institutions, operated on a patchwork of aging, on-premise systems. These systems, while reliable in their time, were increasingly difficult to maintain, lacked integration, and failed to provide the real-time data and user-friendly experience demanded by a modern workforce. The university recognized a critical need to replace its core administrative infrastructure. The decision to move to a cloud-based Enterprise Resource Planning (ERP) system such as Workday was not merely about upgrading software; it was about

fundamentally changing how the university operated.

The Limitations of Legacy Systems

Brown's previous systems presented several significant obstacles. Data was often siloed, meaning that information held in the human resources system did not easily communicate with the finance system. Manual processes were rampant, from time tracking for student employees to complex approval workflows for travel reimbursements. Faculty, staff, and administrators often

found themselves spending precious time navigating cumbersome interfaces rather than focusing on the university's core missions of teaching and research. The administrative burden was heavy, and the insight needed for strategic decision-making was often buried in spreadsheets and disconnected reports. This fragmented technological landscape was no longer sustainable.

The Appeal of a Unified System

Workday offered a compelling alternative. As a cloud-native, Software-as-a-Service (SaaS) platform, it promised a single, unified data model for human resources, finance, and payroll. This

means that when an employee changes their address or a position is approved, that information is instantly and securely available across all relevant modules. For Brown, this integration was critical. The ability to see the full picture—the cost of a research grant, the staffing of a department, and the financial aid distribution—at a glance would be transformative. Furthermore, Workday's intuitive, consumer-grade interface was a major draw. In a world accustomed to the simplicity of apps and online banking, the expectation for simplicity became the standard.

THE IMPLEMENTATION JOURNEY: PEOPLE, PROCESS, AND TECHNOLOGY

Implementing Workday at an institution

as complex and decentralized as Brown University was a massive undertaking. It was not just a technological project; it was a university-wide transformation initiative. The project, often referred to internally as the "Business Transformation Program," or simply the "Workday project," was executed in distinct phases, with a heavy emphasis on change management and stakeholder engagement.

Phase One: Human Capital

Management and Payroll

The initial rollout of Workday at Brown focused on Human Capital Management (HCM) and Payroll. This was the most personal touchpoint for the majority of employees. This phase replaced the systems used for benefits administration, time off requests, personal data updates, performance reviews, and the critical bi-weekly payroll process. For many faculty and staff, this was their first introduction to the platform. The transition was meticulously planned. Hundreds of "Change Champions" and "Super Users" were recruited from across the university

to provide peer-to-peer support. Countless training sessions, both online and in-person, were conducted to help employees navigate the new system. The goal was to make the transition as smooth as possible, acknowledging that learning a new system requires patience and support.

Phase Two: Financial Management

Following the successful launch of the HR and Payroll modules, the next major milestone was the implementation of Workday Financial Management. This

was perhaps the more complex phase, involving the intricacies of grant accounting, procurement, budget management, and expense reporting. For researchers managing federal grants and department administrators overseeing complex budgets, this phase brought significant changes. The old system's opaque processes were replaced with Workday's transparent and auditable workflows. Purchasing requests, travel authorizations, and expense reports could now be submitted and approved through a single, user-friendly interface. The finance team worked tirelessly with departments across the university to ensure the new chart of accounts and reporting structures met the diverse needs of a world-class research institution.

KEY BENEFITS FOR THE BROWN COMMUNITY

The partnership between Workday and Brown University has yielded tangible benefits for different groups across the campus. While the transition was not without its moments of friction, the long-term outcomes have largely validated the strategic decision.

For Faculty and Staff: Empowerment

and Self-Service

One of the most celebrated improvements is the empowerment of individual employees. In the legacy system, many tasks required submitting a form to a central office and waiting days or weeks for a response. With Workday, employees are empowered to manage their own information. Updating a home address, enrolling in benefits, viewing a pay slip, requesting time off, and managing a professional development goal can all be done in minutes. This self-service capability has dramatically reduced administrative overhead for HR and payroll offices, allowing them to focus on more strategic, consultative work. The

"Workday and Brown University" combination has effectively put the employee in the driver's seat of their own administrative life.

For Managers: Real-Time Insights and Talent Management

Department chairs, lab managers, and team leads now have access to powerful dashboards that provide real-time insights into their teams. They can view

headcount, budget utilization against their team's costs, open positions, and even talent and performance data. This visibility is a game-changer for workforce planning. The talent management features, including goal setting, performance reviews, and succession planning, are now integrated into the daily workflow rather than being a once-a-year administrative exercise. A manager can now see who is taking training courses, who is up for a promotion, and how their department is performing against its budget, all within the same system.

For Students: A

Smoother Onboarding and Work Experience

Brown employs a significant number of student workers across its libraries, dining services, administrative offices, and research labs. Workday has streamlined the process of getting students hired, onboarded, and paid. The system integrates with the student information system, making it easier for students to find jobs, apply, and complete their hiring paperwork online. Time tracking, a notoriously cumbersome process, has been simplified, ensuring that students are

paid accurately and on time. This improved experience helps students focus on their studies and their work contributions rather than navigating complex bureaucratic hurdles.

OVERCOMING CHALLENGES AND LESSONS LEARNED

No major system implementation of this scale is without its challenges. The transition to Workday at Brown was a learning experience for everyone involved. Acknowledging these difficulties is crucial for a balanced understanding of the journey.

The Complexity of Change Management

The single biggest challenge was not the technology itself, but the human element. Changing deeply ingrained habits and processes is difficult. Some faculty and staff, accustomed to the old system's ways, found the new workflows to be initially confusing or overly prescriptive. The university had to invest heavily in ongoing training, communication, and support. The help center was flooded with calls in the early days, and "Workday Wednesdays" drop-in training sessions became a staple. The

lesson learned was that change management is a continuous process that lasts long after the "go-live" date.

Data Migration and Accuracy

Migrating decades of complex, sometimes inconsistent data from multiple legacy systems into a single, clean data model was a monumental task. Ensuring that historical payroll data, employee records, and financial transactions were accurately transferred was critical. The university dedicated significant resources to data cleansing and validation before and after the launch. While most data was successfully migrated, some legacy data

issues inevitably surfaced, requiring manual clean-up. This process highlighted the importance of data governance and the need for clear standards moving forward.

Adapting to a Standardized System

Workday is a powerful system, but it is not infinitely customizable. Brown had to make difficult decisions about adapting its own business processes to "best practices" embedded in the Workday software versus asking for custom configurations. The mantra often

became "adopt, don't adapt." This required departments across the university to let go of long-held unique practices and conform to a standard, more efficient process. This standardization, while painful for some, is a key driver of the long-term efficiency gains.

THE FUTURE OF WORKDAY AT BROWN UNIVERSITY

Brown University views its adoption of Workday not as a completed project, but as a foundational platform for the future. The university is now in a position to leverage Workday's continuous innovation to further its strategic goals.

Advanced Analytics and Reporting

With all of its core HR and financial data in one place, Brown is now exploring advanced analytics and reporting capabilities. The ability to use Workday's Prism Analytics or other business intelligence tools to analyze workforce demographics, research grant spending patterns, and student employment trends will enable more data-driven decision-making at the highest levels of the university. This "single source of truth" is the bedrock for strategic planning.

Streamlining the Research Administration Lifecycle

For a major research university like Brown, grant management is a critical function. The future roadmap includes deeper integration of Workday's capabilities to manage the entire research administration lifecycle, from proposal submission through award management, compliance tracking, and final financial reporting. Streamlining this process would be a massive boon to

faculty, freeing up time for the actual work of research and discovery.

Continuous Improvement and User Experience

The work is never done. The university continuously collects feedback from its community to improve the Workday experience. This includes simplifying approval workflows, adding new self-service features, and improving the mobile app experience. The goal is to make the administrative experience as

seamless and intuitive as possible, allowing the Brown community to focus on what truly matters: the pursuit of knowledge and the betterment of society.

CONCLUSION: A FOUNDATION FOR THE FUTURE

The implementation of Workday at Brown University represents a significant milestone in the institution's history. It was a bold bet on the power of a unified, cloud-based system to modernize administrative operations. While the journey has required patience, adaptation, and a significant investment from every corner of the university, the results are clear. The partnership of Workday and Brown University has delivered a more efficient, transparent,

and user-friendly environment for faculty, staff, and students. By replacing fragmented legacy systems with a modern, integrated platform, Brown has not only solved immediate operational challenges but has also laid a robust foundation for future growth, innovation,

and academic excellence. The transition was more than an IT project—it was a strategic transformation that positions Brown University to thrive in the rapidly evolving landscape of higher education for years to come.
