

Mozart Symphony No 25 In G Minor

Mozart Symphony No 25 In G Minor

Downloaded from evoluir.abar.org.br by Jennings & Jax

INTRODUCTION

There are few musical openings as arresting as the first eight bars of **Mozart Symphony No 25 In G Minor**. A surging, unison G minor arpeggio erupts from the orchestra, immediately establishing a tense, dramatic atmosphere that was rare for a seventeen-year-old composer in 1773. This symphony, composed in Salzburg during a period of intense creative growth, is one of only two symphonies Mozart wrote in a minor key (the other being the famous Symphony No. 40 in G minor). Often called the “Little G Minor” symphony to distinguish it from its later counterpart, **Mozart Symphony No 25 In G Minor** K. 183 is a masterpiece of the *Sturm und Drang* (Storm and Stress) style that swept through European music in the 1760s and 1770s. Its emotional intensity, structural sophistication, and lasting influence make it an essential work in the classical repertoire. In this article, we will explore the historical context, detailed movement-by-movement analysis, cultural significance, and enduring legacy of this remarkable symphony.

HISTORICAL CONTEXT AND COMPOSITION

Mozart’s Salzburg Years

By 1773, Wolfgang Amadeus Mozart had already toured much of Europe, absorbing musical styles from Italy, France, and Germany. He was employed as a court musician to Archbishop Hieronymus Colloredo in Salzburg—a position that offered security but limited his creative freedom. Yet in the summer of 1773, Mozart produced a remarkable set of symphonies, including the dramatic No. 25 in G minor. This work stands out because minor keys were still relatively uncommon for symphonies, which were generally expected to be cheerful and bright in major keys. The choice of G minor signaled a new depth of expression, one that resonated with the contemporary literary and artistic movement known as **Sturm und Drang**, characterized by heightened emotion, turbulence, and a fascination with the sublime and the dark.

Influence of Haydn and the Viennese School

Mozart’s exposure to the symphonies of Joseph Haydn, particularly Haydn’s “Sturm und Drang” works like Symphony No. 44 in E minor (“Trauer”) and Symphony No. 45 in F-sharp minor (“Farewell”), is clearly evident in the **Mozart Symphony No 25 In G Minor**. Haydn had pioneered the use of intense chromaticism, surprising dynamic shifts, and syncopated rhythms to create emotional urgency. Mozart built on these ideas but infused them with his own melodic grace and formal clarity. The Salzburg court was primarily conservative, yet Mozart’s symphony suggests a restless, forward-looking spirit that would later fully blossom in his mature works.

Manuscript and Dating

The autograph score of **Mozart Symphony No 25 In G Minor** is dated October 5, 1773. It was catalogued by Ludwig von Kochel as K. 183 (and later as K. 173dB). The symphony is scored for two oboes, two bassoons, four horns (in G, B-flat, and F), and strings—an unusually rich horn section that adds brass-like gravity to the sonority. The presence of two bassoons instead of the customary one also contributes to the darker timbre, especially in the lower registers.

STRUCTURAL OVERVIEW AND MOVEMENT ANALYSIS

The symphony follows the standard four-movement structure of the classical era, but each movement carries its own dramatic weight. The overall key of G minor unifies the work, though the slow movement shifts to a contrasting major key.

Movement 1: Allegro con brio (G minor, 4/4)

The first movement opens with the famous half-bar rest followed by a forceful rising G minor arpeggio. The violent, syncopated rhythm and the use of sharp dynamic contrasts (sudden *piano* after the *forte* opening) are hallmarks of the **Sturm und Drang** aesthetic. The exposition presents a turbulent first theme in G minor, with a second theme in the relative major key of B-flat major that offers a brief respite of lyrical calm. The development section is particularly adventurous: Mozart modulates through remote keys, fragmenting the opening motif and layering it with imitative counterpoint. The recapitulation brings back the opening material in G minor, but Mozart truncates the second theme to maintain tension. A short coda reinforces the G minor tonality, ending the movement with unresolved energy.

- **Key features:** Unison opening, syncopation, wide melodic leaps, chromatic harmonies.

- **Instrumental highlight:** The four horns provide a dark, majestic underpinning, especially in the declamatory passages.

Movement 2: Andante (E-flat major, 2/4)

In a stunning contrast, the second movement is marked *Andante* and shifts to the submediant key of E-flat major. The mood is gentle, almost pastoral, but not without an underlying melancholy. The movement begins with a simple, song-like theme introduced by the strings, accompanied by delicate woodwind filigree from the oboes and bassoons. The structure is a sonata form without development—essentially a compact sonatina. Mozart writes beautifully flowing melodic lines, with subtle chromatic inflections that remind us the peace is fragile. The horns take on a quieter role, offering sustained harmonies. This movement provides the necessary emotional contrast that makes the return to G minor in the third movement even more jarring.

Movement 3: Menuetto (G minor, 3/4) – Trio in G major

The minuet is one of the most striking of the classical era. Instead of a courtly dance, Mozart delivers a stern, almost aggressive minuet in G minor. The dotted rhythms and strong accents on the first beat create a sense of relentless drive. The melody is angular, with leaps of a sixth and seventh. The trio section unexpectedly shifts to G major, offering a moment of brightness with a more relaxed, pastoral character (oboe and bassoon solos are prominent). But the return of the minor-key minuet feels inevitable, and the movement ends with a blunt, no-nonsense cadence. This use of a contrasting major key within a minor-key symphony was innovative for its time.

Movement 4: Allegro (G minor, 2/2 – alla breve)

The finale is a whirlwind of energy. Marked *Allegro* and in cut time, it opens with a breathless running figure in the strings, punctuated by sharp *sforzando* chords. The movement is in sonata form, but the development section is more compact than the first movement’s. The second theme again appears in B-flat major but is quickly swept away by the restless G minor drive. The syncopated rhythms and relentless forward motion are reminiscent of the finale of Haydn’s “Farewell” Symphony. The coda is intense, with the strings climbing to a high G before a final, decisive orchestral thrust. The ending is not tragic but fierce, leaving the listener invigorated rather than sorrowful.

MUSICAL SIGNIFICANCE AND ANALYSIS

The “Little G Minor” and Its Relationship to Symphony No. 40

Why is **Mozart Symphony No 25 In G Minor** often called the “Little G Minor”? Simply to distinguish it from his Symphony No. 40 in G minor, K. 550 (1788). The later symphony is longer, more psychologically complex, and uses counterpoint far more richly. But the No. 25 is no mere precursor; it is a fully realized work of dramatic intensity. Both symphonies share a similar opening gesture (unison arpeggio) and both are in G minor, but No. 25 is more overtly *Sturm und Drang*—more angular, more restless. No. 40, by contrast, contains a deeper pathos and a famous melodic sweetness. Listening to them side by side reveals Mozart’s remarkable evolution as a symphonist over fifteen years.

Use of Instruments for Dramatic Effect

The scoring of the **Mozart Symphony No 25 In G Minor** is innovative: four horns (doubling parts) add a weight rarely heard in earlier symphonies. Mozart uses the horns in two pairs: two in G and two in B-flat (or F) to cover the full range of keys. This allows him to write sustained horn passages in the outer movements that are both powerful and dark. The bassoons often double the cellos and basses, reinforcing the lower strings, but they also have independent lines—especially in the Andante, where they create a plaintive countermelody. The oboes provide piercing, mournful colors in the minor-key sections. The result is a sound world that is both rich and stark, perfectly suited to the work’s dramatic intent.

The Sturm und Drang Aesthetic

Mozart’s symphony is a textbook example of the *Sturm und Drang* style in instrumental music. Originating in German literature, this movement emphasized raw emotion, the sublime, and revolutionary fervor. In music, it translated into minor keys, abrupt dynamic changes, syncopation, and sudden silences. The **Mozart Symphony No 25 In G Minor** has all these elements: the opening silence before the arpeggio, violent contrasts between *forte* and *piano*, and the use of diminished seventh chords to create anxiety. Notably, Mozart refrains from resolving the tension in a major-key triumphant ending; the final movement stays firmly in G minor, achieving catharsis through unrelenting energy rather than pure darkness.

CULTURAL IMPACT AND LEGACY

Use in Film and Popular Culture

Perhaps the most famous modern encounter with **Mozart Symphony No 25 In G Minor** is its appearance in the 1984 film *Amadeus* (directed by Miloš Forman). The symphony’s opening theme blasts over the opening credits and is used during the intense “Confutatis” sequence to underscore the fiery, hellish vision of Mozart’s *Requiem*. The director, along with music editor Walter Murch, chose this symphony because its raw, youthful energy symbolized Mozart’s genius before it was broken by Salieri’s imagined machinations. The performance was recorded specifically for the film, with the Academy of Ancient Music under Christopher Hogwood. The use of period instruments (lower pitch, natural horns) gave the symphony a sharper, more abrasive sound that perfectly matched the film’s dramatic aesthetics.

Performance History and Notable Recordings

In the concert hall, the symphony has remained a staple of the classical repertoire. Early recordings by conductors such as Wilhelm Furtwängler, Karl Böhm, and Leonard Bernstein are revered for their dramatic power. On period instruments, recordings by Sir John Eliot Gardiner (English Baroque Soloists) and Nikolaus Harnoncourt (Concentus Musicus Wien) have illuminated the symphony’s raw, uncompromising sonorities. Modern orchestras often play it with a full string section, but the best performances retain the tension between aggressive attack and lyrical relief.

Influence on Later Composers

The influence of **Mozart Symphony No 25 In G Minor** can be traced through Beethoven’s early C minor works, especially his Symphony No. 1 in C major, which pays homage to Mozart’s symphonic style, and his Symphony No. 5 in
